

Website Proposal

I want to expand on my midterm and this time I want to add a shopping page and more images to describe each object, using flex box. My midterm website was about rock climbing and its equipment. I think I want to add some animation where when you hover over the nav bar links they will bounce. Before I had it so that the title bounces but now I want to change it so that the nav bar bounces. Therefore, I want to add more tabs to the nav bar, such as a shopping page and a game page.

The shopping page will have a maximum for big boxes on a page, each box will have different types of rock climbing gear that are listed on the “equipment” page. Whenever you click on an item, there is a “see more” and it will have a drop down to explain the equipment, including its size and length.

For more interaction, the game page will use the javascript Terrarium inspiration. It will be about dragging all the appropriate gear to an individual who is ready to climb a mountain.

Typography:

Fonts:

<https://fonts.google.com/specimen/Sekuya?preview.text=block> (title)

<https://fonts.google.com/specimen/BBH+Bogle?preview.text=block> (headings)

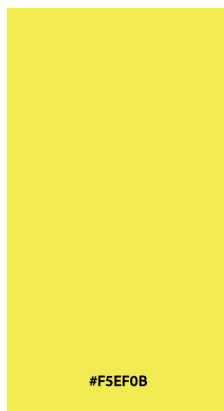

<https://fonts.google.com/specimen/Fira+Sans?preview.text=block> (everything else)

Colors:

I want my colors to be bold, either black/yellow or yellow/blue (EX, YELLOW, BLUE, will be the main colors and black/white will be for everything else. Another example would be if the nav bar is yellow, the text of the nav bar will be blue. Main text will be white or black, depending on what color the background needs

Animation:

When hovering over the nav bar, it will bounce. (add more to nav bar)

Interaction Ideas: Using JQuery to press “see more” as the description for the products/shop

- a “click me” button! And expand the description
- Terrarium inspiration (drag all the appropriate climbing gear to a person)

Shop Page:

- Two big boxes, 4 max on one page
- “Read more” button, “Add to cart” button
